# INTRO

Quality you can trust - is not only our new slogan, but it really is the main focus of CrazyFly company, since we ever started building CrazyFly products. It is the way how we develop the best products for our customers and it is the way how we build the products. Quality can be found in every step of CrazyFly kiteboards production process: choosing the highest quality materials delivered from European suppliers, hand wet out lamination, hand finishing the boards, safe and effective packing and choosing reliable and experienced transport companies to bring everything to the customers. And it does not end only by delivering the product. CrazyFly has great after sale service and in a rare case of a warranty issue, we do take care of these without hesitation. The most important is - we handle these very fast. Just ask anybody who ever had some request or claim on CrazyFly.

As CrazyFly company is a direct producer of kiteboards, we are always one step ahead of the others. New ideas and concepts are developed directly in our own production. It is fast and effective and we are always able to follow the market demand immediately.

This year we also bring brand new Rookie trainer kites - the first ever two line relauchable trainer kite for those who want to get into kiting or just play. Read more about it on next pages of our catalogue. Whatever it is kiteboard, trainer kite, boardbag, lycra shirt or shorts, CrazyFly is always Quality you can trust.

WELCOME  
CRAZY :)

**Jozef Bukovčák**  
The Big Boss. He is the founder and starter of CrazyFly company. Jozef is the only owner, main director, and chef of R&D and production.

**Michal Bukovčák**  
Director of art & designs and technical support. This guy knows it all in terms of electronic graphic designs, web designs, and programming. Just give him a scratch on a piece of paper, and he will do his magic with computer.

**Jozef Bukovčák Jr.**  
Sales and financial manager. He assures your satisfaction when you order CrazyFly products.

**Juraj Bukovčák**  
Marketing & management consultant and editor. He gives meaningful advices to our top management based on his market research. Also translates the quality of the boards into words.

**Mirka Bukovčáková**  
Customer services. We need a lady's touch. She is the angel when customers have a little trouble and Mirka is the professional to help you.

**Iveta Bukovčáková**  
Administration. She has to deal with everyday administration work. More or less, Iveta takes care of every job that the Big Boss assigns to her.

**Pavol Bukovčák**  
Graphic designer. He is a crazy young guy and is the style, design, and fashion of these days himself.

# QUALITY YOU CAN TRUST

# TECHNOLOGY

## CNC WOOD TECH CORE II

The heart of kiteboard is its core. The core of the board must be light, flexible and firm. It is very difficult to make a good core by using just one core material. What makes our board so unique is its combination of light and stiff materials used to produce a suitable core. Wood is a natural material with excellent mechanical properties. For the production of 2009 boards we carefully chose the best-fit kind of wood. The fibers of our wood selected for the new system are continuous from one tip to the other one. Also the Wood Tech Core is precisely CNC shaped without any mistakes. We have proven all the features of our successful system, and improved each of them. The result is CNC wood tech core II. The best solution for a kiteboard core on the market. Used exclusively in our Raptor boards and Rocky Chatwell Pro model.

## 3D ABS RAILS

We decided to use ABS side walls construction as the best one in this industry. ABS is a high strength, very durable thermo-plastic material. The adherent bonding with upper and lower reinforcement carbon materials creates a torsion box, with high torsional stiffness. CNC shaped and hand fine finished rails you can be found on all of our boards. Bright colors help you to find your board in the water.

## PROGRESSIVE FLEX TIPS II

It is very complicated to make a mathematic simulator of flex which would be accepted by top riders. We have chosen the other way: to make an analytic search of human feelings of our riders and test riders. We improved our successful progressive flex tips on the boards for the year 2009. It is accomplished by allowing more flex on the tips only and making the central area of the board even stiffer.

## NANO FIBER CARBON TECHNOLOGY

Years ago we decided to use carbon fabric as a main part of the construction of CrazyFly kiteboards. Today we see it was a right decision.

Carbon fiber comes as a high strength, high stiffness and very light synthetic fiber. Carbon fiber composites are ten times stronger than steel, and still five times lighter. Carbon fibers have amazing structural properties. You can find them on the best products humans had ever produced: in construction of Formula 1, in aerospace technology, military secret programs, and the best sport racing equipment. The result of our tight intensive research and tests with developments from the carbon industry is Nano Fiber Carbon Technology exclusively used in production process of CrazyFly kiteboards. What makes this system so unique is the higher tensile modulus and faster dynamic response. It makes the flex of our boards very attractive and the pop amazing.

## SHOCK ABSORBING SYSTEM

After a couple hours of riding in choppy water your knees are tired and hurt. Our new developed Shock Absorbing System damps the shocks from water and vibration of board during performance riding. The unique smooth feeling of riding is guaranteed with cooperation of our Shock Absorbing System and Progressive flex II control system. Both together, they make the CrazyFly board amazingly collected. Now you can ride while the sun is up in the sky.

# QUALITY YOU CAN TRUST

# RAPTOR

## RAPTOR:

127x38 127x40 132x39 132x41 132x43

137x39 137x41 137x43

The new Raptor 2009 line continues to develop in the best direction. Raptor became one of a kind as our R&D team got their job done. Close cooperation with many riders from all around the world brought the desired and once again astonishing results. Finding the right balance between stiffness and flex, we created the progressive flex tips II technology, and brought the pop to the top. Meaning that the shock absorbing system, progressive flex tips II, enhanced pop, and the newly shaped tip's outline, makes the take offs easier and the landings much softer, preventing your knees from pain. Special 3D effect color changes colors like a chameleon from red to green, which makes the design very eye catching. The UV stable top sheet foils assure that the design will maintain its looks even after direct tropic sunrays heat up the board.

We implemented new faster scoop rocker line and a slightly concaved bottom to make the 2009 Raptor faster and to improve its upwind abilities. To make every CrazyFly board more personalized, with the new super lightweight dual density EVA pads we included the option of adjusting the stance angle, so everybody is now able to adjust the stance angle to match all the preferences.

Raptor 2009 still remains one of the few boards on the market build with full Nano Carbon construction in series production. Our new CNC shaped Wood Tech Core II makes the board one of the lightest in the world. CNC shaped and hand fine finished 3 Dimensional ABS rails in combination with carbon layers and Wood Tech Core II are the heart of this unique board. Raptor 2009 comes with Quick Fix straps, handle and G 10 fins, which match the design of the board.

# BULLDOZER

## BULLDOZER:

130x39 130x41 135x39 135x41

SPECIAL 3D EFFECT COLOUR

Bulldozer blasted its way into high performance kiteboarding last year, and this year it is ready to do even more "damage". Bulldozer represents a mixture between the Rocky Chatwell board and Raptor. This mixture creates a new school free style board, with a little bit flatter and straighter outline, wider tips, excellent pop and great speed. Bulldozer is a stiff board for advanced riders with aggressive style, but the board is not as aggressive in turns as Raptor.

Bulldozer's 2009 construction is based on the new high tensile strength Uni Directional Carbon fibers, and CNC shaped Wood Core which makes the board stiff, fast and very poppy. Bulldozer offers the option of wider stance and with our new super lightweight dual density EVA pads we included the option of adjusting the stance angle, which provides more comfort for your feet and more freedom for your stance set up than ever before. Improved progressive flex on the newly shaped cut tips, along with the shock absorbing system and slight concave bottom creates an unforgettable kiteboarding experience. CrazyFly designer's special 3D effect color, CNC shaped 3 Dimensional hand fine finished ABS rails, and the stance angle adjustable pads conceptualize this board to feel like it is custom made for everyone. Bulldozer 2009 comes with Quick Fix straps, handle and G 10 fins, which match the design of the board.

# GIRLS

THINK PINK!!!

## GIRLS:

127x38 132x39 135x41

CrazyFly continues to be one of the few brands producing boards specially designed for girls. Inspired by the success of 2008 design, our designers chose more vivid colors, which made the boards even more visually attractive. Girl's board does not only look good, but also exhibits high quality and performs / rides incredibly well on water. Improved progressive flex on the tips and the new shock absorbing system provides softer landings, which prevents your knees from pain.

Girls 2009 high class construction combines the new CNC shaped wood core and the 4 axis glass, which enhances the properties of the board, such as flex, pop, and carving abilities. CrazyFly's new super light weight dual density pads are now more adjustable than ever before. This new technology enables the rider to adjust the stance angle of the pads in a few seconds. Concave bottom and the 3 Dimensional hand fine finished ABS rails comforts smooth riding and carving.

Girls board comes with Quick Fix system small S straps, handle, and G 10 fins, which match the design of the board.

# ALLROUND

MY NAME IS  
CRAZY KITEBOARDER

135x40 138x40 138x43 145x41 145x48

Our Allround is one of the most popular Allround boards, especially known for its high quality and reasonable price. Allround suits the beginners as well as advanced riders, and rides smoothly even in lighter winds, due to its amazing upwind abilities.

This year, Crazyfly designers created a brand new concept and exchanged the herex core of the board for a top quality CNC shaped full wood core. Wood is a great raw material with natural behavioral properties; therefore, no plastic materials can replace wood. As usually CrazyFly's Allround 2009 exhibits exceptional quality as all the other boards from the higher lines.

To tune up the performance of this board, designers also improved the progressive flex tips and included new bevelled ABS rails. New outline on the tips eases the take off and landings of jumps. Setting up the stance has never been easier than it is now with the stance angle adjustable pads.

Allround comes with super lightweight EVA pads, molded fins, handle, and asymmetric adjustable straps.

# CRUISER PRO WAVE

Cruiser Pro is a light wind machine. This new version is a very speedy board and offers a lot of fun even during low wind riding. Our precisely developed construction gives this board easy early planning ability even in very light winds which is very enjoyable. Medium flex of this board suits intermediate riders as well as more experienced riders. It rides comfortably in choppy waters, has flat rocker and narrower tips which makes it a great light wind board. Its upwind ability is superior which is especially important with light wind boards.

Wood Core and Nano Carbon technologies make the board very light considering its size. CNC shaped and hand fine finished 3Dimensional ABS rails are of course a part of Cruiser Pro. This year we offer three different sizes 135x46, 145x44, and 145x48. We choose smaller G10 fins for less drag. It comes with Lightweight Dual Density EVA footpads, Quick Fix Straps, G10 fins, and a handle. We build Cruiser Pro with the high quality materials available, so you can really rock even in low winds.

This Board is also available in 4-Axis glass construction with 3T CNC Wood Core Tip To Tip and 154x39 or 154x44 size. We called it simply Cruiser.

Challenge the power of ocean waves with the new 2009 CrazyFly wave board.

CrazyFly 2009 wave board comes in two different sizes 6'2" and 5'5" and both of these are ready to rock even the in the biggest waves and in high powered conditions. Wave has the construction of a real surf board. High density EPS core reinforced with wood on the deck are the most balanced combination for the best wave riding experience. Real surf rails tucked under edge make it easy to hold carves perfectly, whether it is a sharp one or a wider one. Flat rocker and concave bottom generate superior rocket like glide to make you feel like a flying bullet. Unlike a real bullet, this one is under control. Due to its round tail shape this wave board's responsiveness and agility, with low effort from the rider, is incredible. Unique way of construction, not only makes CrazyFly wave board one of the lightest and most durable products on the market, but also enhances floatability. Great floatability of this wave board fuses the rider with one of the most stable boards, which a very important feature of any wave board. It also enables the rider to use a smaller kite, and gives the advantage of faster turns and more aggressive riding. Our new 2009 EVA pro one piece footpad offers a variety of riding styles: strapped riding as well as strap less riding, or riding with one strap only.

Offering two different sizes, the 6'2" suits even the heavier riders due to greater floatability. CrazyFly's bigger wave generates more speed easier, and enhances the stability. On the other hand the 5'5" suits lighter riders more and is a little bit more responsive and agile. Both sizes come with one piece EVA pro footpad with heel step, symmetrical straps, and three minituttle carbon fins. It is hard to find the right wave in the ocean, but it is easy to find the right CrazyFly wave board.

# IT'S A FAMILY BUSINESS

Fly like crazy to the sky with the new trainer kite made by CrazyFly. It was carefully designed & developed over a long period of time by our team of experts, to bring the best satisfaction and enjoyment when learning to kite. The most outstanding feature of the new Rookie's Trainer Kite, is its relaunchability. Everybody hates when the kite hits the ground, but with the new CrazyFly Rookie Trainer kite it is not a problem anymore. CrazyFly's unique design enables the kite to relaunch itself from the ground with almost no effort from you. If the Rookie kite hits the ground up side down it rolls over and reinflates by itself, and the wind picks it up to the sky. Allow the kite to do the work for you, and just enjoy the fun experience of flying the kite, in exchange of running to pick it up every time it falls down. The new CrazyFly Rookie kite stands up to the highest standards of quality and safety as well. It was build, not to meet, but to exceed all the expectations. It come in two sizes 2m<sup>2</sup> & 3m<sup>2</sup> and with two lines, handle bar, wrist safety leash, and a CrazyFly logoed hanging bag

The Rookie is the first ever two line relaunchable trainer kite.

Just pull on one line and the Rookie pops off the ground and easily relaunches. The most stable & smooth trainer out there!! Comes complete with bag, bar, handle, and lines Ready To Fly!!!! The kite has self-cleaning vents so any sand that gets in it will automatically be dumped out. Strategically positioned internal baffle vents evenly distribute pressure throughout the kite, making it the most durable trainer available. Being able to relaunch after a crash saves time and effort, and we are amazed at what these kites can hold up too. The 3 m<sup>2</sup> also works great as a inexpensive kite to use with a mountainboard or skateboard because of its smooth power generation and amazing stability.
