# 10 YEARS OF ADVENTURE

## CrazyFly Kiteboarding is celebrating 10 years anniversary

Ever since we started producing CrazyFly kiteboards we were striving for highest build quality and top performance. Over the ten year period we have been able to stick to our mission due to constant innovations in production processes, choosing recently innovated materials and coming up with innovative technologies on the products themselves. We have kept our true face in producing full carbon kiteboards, while other companies are only talking about carbon in their boards, we are still producing high performance full carbon kiteboards. Based on our ten years experience and tests, we simply believe that if you want the highest performance board, carbon is irreplaceable.

Ten years is a lot of time and it certainly was a lot of work to get the product and the brand to the level where they stand today. Therefore we would like to sincerely say thank you very much to everybody who helped us along the way. Especially we would like to thank our distributors, dealers, riders, suppliers and of course all of our retail customers. Your support is highly appreciated here at CrazyFly and we will continue to do our best in providing the highest quality Kiteboarding equipment.

We believe we have proven that CrazyFly brand is the symbol of highest quality on the Kiteboarding market.

# KITES - NEW ERA

## Let the new Era of CrazyFly begin

After ten years of working very hard on the kiteboards we have decided to enlarge the company and add a new product line of water kites. We believe the new Era of CrazyFly company with the kite project will be as successful as our kiteboards. We have been testing, developing and collecting feedbacks about our kites for almost two years and we are sure that CrazyFly kites have the quality standards required to be branded as CrazyFly.

We do have a lot of improved and new stuff for the 2011 season, so make sure to check out all of the new products, pics and videos.

Remember, whatever product it is, CrazyFly is always quality you can trust.

CrazyFly kites are designed in our house using the latest professional kite designing software. Our R&D team composed from engineers, designers and test riders work together closely, striving to build the best kites possible.

CrazyFly has always built high quality products from top quality materials and the kites are no exception. High quality components, such as: Dacron, Ripstop, lines, or pulleys, delivered from leading suppliers in the industry.

All CrazyFly kites are tested by experienced test riders in many different parts of the world and in various conditions, ranging from lightwind to extreme. The kites really get a life time durability test in those extreme conditions.

# SCULP

7m  
9m  
11m  
13m

## Top performance kite for freeride and freestyle

Sculp is a high performance kite for intermediate level riders all the way to experts. It provides all aspects any rider would expect from a high performance kite. Sculp really is something every rider will appreciate, as it offers more variety of use than any other kite on the market, ranging from freeride to un-hooked freestyle, including race with its amazing upwind and charging waves.

It is a 3 strut and 4 line SLE kite with original flat delta shape designed by CrazyFly. Sculp has instant turning responses, reacts to inputs immediately and feels like there is no distance between the rider and the kite. Due to its speedy profile and light weight provided by the 3 struts construction, Sculp is able to cut extremely fast through air and generate loads of power. With such quick responses and speed, powered kite loops or going for huge hangs in the air is a piece of cake with this kite. Sculp is a perfect tool to for progressing from simple tricks to un-hooked freestyle tricks. Simple relaunch of this kite will make the learning process much easier and quicker as Sculp pops up in the air almost automatically. With its very wide wind range and excellent upwind abilities Sculp stands out from the crowd in race and wave riding. Having problems in gusty winds does not exist in the Sculp's dictionary, its strong build quality and shape make it stable even in big gusts. Sculp is all about fun, power, speed and performance.

As with all CrazyFly products, Sculp stands for the highest standards of quality, whether it is materials, manufacture, finish quality or design. Sculp is a kite ready to deliver the highest performance for, freeride, freestyle, race and wave riding.

Sculp comes complete with improved Equip bar II, kite bag, pump, safety leash and a small repair kit.

## KITE BENEFITS:

### >> Flat Delta Shape

Originally designed by CrazyFly for top performance user friendly kites with automatic relaunch, wide wind range and comfortable flight.

### >> 3 Strut Design

Reduces the weight of the kite and increases performance. Due to the high quality of materials the kite is strong enough even with 3 struts only.

### >> 4 Line System

Simplicity with all necessities. Instant control and easy relaunch even with four lines due to the shape of the kite. Much easier set up on the beach and less tangles. All lines are standard 24 meters long.

### >> One Pump System

Is an easy way how to inflate the kite quickly with the same pressure throughout the kite.

# SLASH

5m  
7m  
9m  
11m  
13m

## Top freestyle competition performance

Slash is a 5 strut and 5 line C- shaped kite which delivers some serious Pro competition freestyle performance. What may seem surprising is the fact that Slash still offers high depower and very easy relaunch even without a bridle system.

Slash can be easily and safely used by intermediate riders due to its high depower system. Slash is not a pure old fashion C kite, although it has all the advantages of it, Slash is quite a bit of an all rounder as well. Even though there is a vast power potential that comes with Slash, it is up to the rider to decide how much power will be unleashed. With a five line system and no bridle Slash has instant control and extremely quick reactions. Slash has huge pop, steady pull and massive kiteloops come with ease. For those riders looking for loads of power for un-hooked freestyle tricks, Slash is definitely the right choice.

The rider can choose between two basic set ups, freestyle or wakestyle. Freestyle set up allows higher depower, but cuts a bit of power at the high end. Wakestyle set up allows Slash to have the most power it is able to deliver, but on the other hand there is not as much depower possibility as with the freestyle set up. Once again this feature allows the rider to choose and stay in control. Slash does not have a one pump system in order to get highest possible pressure into all struts and leading edge. As we all know, C- kites are usually exposed to many crashes and slams on the water during practice sessions. Having more pressure in every single part of the kite makes it much stronger to absorb the energy of crashing on the water. Slash is all about the C kite feeling, control of power and top freestyle performance.

As with all CrazyFly products, Slash stands for the highest standards of quality, whether it is materials, manufacture, finish quality or design.

## KITE BENEFITS:

### >> C Shape

Classic high speed turning C-shape kite with depower option.

### >> 5 Strut Design

Top performance freestyle kite needs a strong construction and a firm feel for those powered unhooked kiteloops.

### >> 5 Line System

The fifth line added some extra spice to bring the performance to the highest possible level. 5th line also works as a safety line. All lines are standard 24 meters long, so it is easy to replace them.

### >> Multi Vents Pumping System

Allows high air pressure in the struts separately. This makes the kite stronger in maintaining its shape and much more immune when crashing it on water during freestyle practice sessions.

# MOOWII

7m  
9m  
11m  
13m

## Smooth flying, comfort and safety

MooWii is a perfect all round kite with great performance and value for money. It is a 3 strut and 4 line SLE kite with original flat delta shape designed by CrazyFly. Due to its shape and design the MooWii kite is able to deliver a good all round performance with slower and forgiving reactions. MooWii has perfect flying abilities, is very stable in the air and turns very smoothly. With its slower reactions, it is easily controlled and therefore it is very forgiving to the rider's mistakes. MooWii generates great power and provides more than enough hang time for learning the first tricks. These are the reasons why the MooWii is a perfect tool for those riders looking for progress and for those looking for a kite with good performance for great price. We believe safety is one of the most important aspects of every kite, therefore MooWii provides 100% instant kill of power when the push away safety system is triggered. Wing tip handle for self rescue is of course included. In the early stages of Kiteboarding relaunching a kite is an everyday job for the rider, but with the MooWii kite relaunching is something to enjoy. Very low inputs are necessary to get MooWii back in the air as it relaunches almost automatically. Due to its performance properties stated above, MooWii is a great kite for snowkiting. MooWii is all about smooth rides, comfort and safety.

As with all CrazyFly products, the MooWii stands for the highest standards of quality, whether it is materials or manufacture. MooWii is the perfect combination of great value, high quality and performance for irresistible price that anyone can afford.

MooWii comes complete with improved Equip bar II, kite bag, pump, safety leash and a small repair kit.

# KITE TECHNOLOGY

## >> Teijin Technoforce™

Most technologically advanced ripstop material for the canopy of the kite. This high density polyester yarn provides for ultra light weight, high tearing strength and long durability. For long durability, Teijin Technoforce™ is coated with UV protection on both sides.

## >> Dacron Reinforcements

Leading edge, struts and trailing edge are reinforced with heavy duty Dacron material for maximum durability and higher abrasion resistance.

## >> MarkCloth Reinforced Ripstop

MarkCloth is used to reinforce the area between heavy Dacron and ripstop. This provides stronger structure and longer life time of the canopy. All seams of ripstop and Dacron are reinforced with MarkCloth.

## >> Glued Overlap Seam

All sewing of different panels is glued together and sewed together for higher durability. Panels overlap on each other and are glued together on the overlapping part. This is further enhanced by heavy duty precision sewing.

## >> Flat Delta Shape

Has all the benefits of a classic delta shape kite and turns all of its disadvantages into advantages.

## >> Speed Profile Struts

Learning from the airplane and wing design industry we came up with a special speed profile of the struts. This profile shape increases the speed of the kite rapidly.

## >> 3 Strut Design

Reduces the weight of the kite and increases performance. Due to the high quality of materials the kite is strong enough even with 3 struts only.

## >> Angled Vents

Air vents used for the one pump system are angled to make it stronger and more reliable. These vents were designed to be very user friendly.

## >> One Pump System

Provides an easy way how to inflate the kite quickly with the same pressure throughout the kite.

# EQUIP BAR II

## Power under control

CrazyFly Equip Bar II was carefully developed and designed to be: simple, easy to use, comfortable, safe and of highest quality. Of course it also had to perform extremely well. With these thoughts in our minds we have designed the ultimate bar control system.

The comfort and the performance of this control system are unbelievable. The rider will feel very connected to the kite and very much in control. Comfortable EVA grip and soft DuPont® Bar Ends provide a luxurious touch and feel. The rider is in control even in troubles or dangerous situation.

Thanks to our push away safety system the rider is able to instantly kill the power of the kite with just one simple push. This bar offers a lot variety of usage, and can be adjusted accordingly in few seconds. Equip Bar II is 4 lines and 5 lines compatible.

### BAR BENEFITS:

- >> Simple and clean design
- >> Push away safety system
- >> Integrated Clamcleat®
- >> Internal back lines adjustment
- >> Soft DuPont® bar ends
- >> Smart stopper
- >> Auto position chicken loop
- >> Teufelberger® FL-10 flying lines
- >> All lines are standard 24 meters long

bar lengths:

45 cm  
52 cm

>> equip.bar.II - 4 lines

>> equip.bar.II - 5 lines

### >> Teufelberger® FL-10 flying lines

Highest quality Dyneema® flying lines from the leader in the industry specially designed for kiteboarding. FL-10 Flying Lines have a higher breaking load, lower elongation and lower specific weight than competitors. These lines have set a new standard for abrasion resistance due to new coating. A patented construction with monofil layer assures no kinking.

### >> Wear test over Korund

Korund is the second hardest mineral on Earth just behind the diamond and gets used to make the most abrasive wear tests!

On the image:

- >> 100 cycles over korund
- >> 5kg weight
- >> with no twist
- >> new coating for production 2011

>> 2010 line

>> 2011 line

### >> Push away safety system

Simple and easy to use safety system. We have used the highest quality materials possible for the safety system to make it extremely reliable. This system will never let you down in troubles, because you can simply push them away.

### >> Integrated Clamcleat®

Original Clamcleat® is integrated in the Equip Bar II and enables quick and easy adjustments of the depower line. Once the adjustments have been made the Clamcleat® locks the line firmly. Pulling the depower line away from the bar makes the kite more depowered. The rider is able to tune up the kite to its maximum performance according to current wind conditions.

## High performance new school freestyle board for competition level

125 x 41  
130 x 40  
134 x 41

### SELECTOR:

FREERIDE:

FREESTYLE:

WAKESTYLE:

WAVE:

RACE:

LIGHTWIND:

Pro Tour Model is the top board in CrazyFly range of freestyle boards. It is designed purely to be used for new school freestyle and aggressive riding. This board was ranked by Kiteworld magazine as one of the top three freestyle boards on the market. Highest quality of materials and perfectionism in details can be seen on all the parts of this board.

Brand new technology called Crazy Flex Tips developed by CrazyFly is integrated in Pro Tour Model. New technologies in composite materials allowed us to produce ultra thin tips which are extremely flexible and very strong. Crazy Flex Tips make the kiteboard very comfortable and extremely responsive. They generate much more pop and provide the softest possible landings. You can really load up this board and it just explodes when popping you up in the air. We believe this technology makes kiteboarding even more fun than it ever was. Crazy Flex Tips pushed Kiteboarding to a new level.

Pro Tour Model is produced with full carbon construction and with extra carbon fiber reinforcements between the feet. Layers of carbon combined with finest selection CNC shaped wood core and 3D ABS rails create a very strong, ultra light and extremely poppy board. Because of its construction, Pro Tour Model is not suitable for all riders. It is aimed at experts and Pros who are looking for a stiff board with explosive pop and wide stance for stable landings.

This year we have developed brand new Pro Comp Pads and Straps for maximum lock in. Narrow footpad shape and wide footstrap shape create a feeling of riding in wakeboard boots bindings. Therefore Pro Comp Pads and Straps are very suitable for freestyle and wakestyle. This binding system is mounted with four screws on each foot to really connect the rider with the board. Pro Comp Strap has two velcros for maximum tightening and the Pro Comp Pad has a countour heel shape for maximum lock in. You feet will not move an inch. This system is using the Quick Fix system II for mounting it to the board. Pro Comp Pads and Straps are only available with Pro Tour Model. Standard pads and Quick Fix II straps are also compatible.

Pro Tour Model comes complete with Pro Comp Pads and Straps, Quick Fix II mounting system and G10 fins.

### BOARD BENEFITS:

- >> Top class board
- >> This board is very stiff with a lot of pop
- >> Crazy Flex Tips - extremely thin tips with amazing flex and strength, almost impossible to break them during riding
- >> Pro Comp Pads and Straps for maximum lock in. Narrow footpad shape and wide footstrap shape create a feeling of riding in wakeboard boots bindings
- >> Carbon construction makes the board lighter and you will really feel the difference during jumps. It also makes the board stronger and lowers the breakability
- >> Tip To Tip wood tech core II has no joints, maintains wood's natural flex properties, and is incredibly light

- >> Medium flex for smooth comfortable freeride and soft landings
- >> Crazy Flex Tips - extremely thin tips with amazing flex and strength, almost impossible to break them during riding
- >> Carbon construction makes the board lighter and you will really feel the difference during jumps. It also makes the board stronger and lowers the breakability
- >> Tip To Tip wood tech core II has no joints, maintains wood's natural flex properties, and is incredibly light. The rider can enjoy a light board with excellent flex and pop properties

Raptor Pro is a living legend. Best selling board for freeride and freestyle with astonishing performance. In the long history of this board we have never met anyone who would not like the board. The thing that makes Raptor Pro so special is that every rider can find their own reason why they like this board so much. It offers a wide scale of usage for many different riding styles and delivers a very high performance in all of its aspects.

Brand new technology called Crazy Flex Tips developed by CrazyFly is integrated in Raptor Pro. New technologies in composite materials allowed us to produce ultra thin tips which are extremely flexible and very strong. Crazy Flex Tips make the kiteboard very comfortable and extremely responsive. They generate much more pop and provide the softest possible landings. You can really load up this board and it really pop you up in the air. We believe this technology makes kiteboarding even more fun than it ever was. Crazy Flex Tips pushed Kiteboarding to a new level.

Raptor Pro is produced with full carbon construction, precisely shaped CNC wood core and 3D ABS rails. Full carbon construction provides much more pop, and makes the board very responsive as well as it brings down the weight and increases strength of Raptor Pro.

This board is suitable for high performance freeride, but if you step on the gas pedal, Raptor Pro has enough power for freestyle tricks. Raptor Pro is aimed at intermediate, advanced and Pro riders who are looking for a high performance freeride board, powered carving and a lot of pop for jumps. Even though this board is designed more for freeride, it will not let you down by any means, if you push it harder to perform freestyle tricks.

Raptor Pro features an elegant carbon fiber look, 3D metallic colors and comes with EVA pro footpads, Quick Fix II footstraps, handle and G10 fins.

Raptor Pro

# RAPTOR PRO LTD

## Top performance freeride and freestyle enhanced by double concave bottom shape

Raptor LTD is a brand new high performance freeride & freestyle board in CrazyFly's range.

This board has a unique double concave shape combined with full carbon construction and strong CNC shaped tip to tip wood core, which provide amazing control of flex, stiffness and pop. Cutting powered turns and making transitions with this kind of bottom shape is so easy that anyone can feel like a Pro. Say goodbye to water splash, as the concave channels direct the water exactly where it belongs – away from the rider.

Raptor Pro has a brand new technology called Crazy Flex Tips, which make the kiteboard very comfortable and extremely responsive. They generate much more pop and provide the softest possible landings. You can really load up this board and it just explodes when popping you up in the air. We believe this technology makes kiteboarding even more fun than it ever was. Crazy Flex Tips pushed Kiteboarding to a new level.

Double concave shape gives the rider much more stability in difficult landings and much more power when loading a jump. Riding in choppy waters has never been more fun than with the new Raptor LTD board. In addition to eating up chop easily, this board is a very fun tool to play with in smaller to medium waves. This high performance board is simply great because it can be used for many various ways of riding styles. It suits wakestyle riding perfectly because of the concave shape.

Raptor LTD features a special double concave shape, 3D metallic colors and is equipped with EVA pro footpads, Quick Fix II footstraps, handle and G10 fins.

### BOARD BENEFITS:

- >> Double concave shape provides amazing control for cutting powered turns. Much more stability in difficult landings
- >> Crazy Flex Tips - extremely thin tips with amazing flex and strength, almost impossible to break them during riding
- >> Carbon construction makes the board lighter. It also makes the board stronger and lowers the breakability

# BULLDOZER

## New school freestyle, wakestyle and aggressive riding

New school freestyle wakestyle, aggressive riding and extra loads of pop are the first phrases in Bulldozer's dictionary. This board is shaped and constructed to be pushed hard and it delivers amazing performance on water.

CrazyFly R&D team developed a brand new concept in construction of Bulldozer 2011, which radically improved the riding performance.

Brand new technology called Crazy Flex Tips developed by CrazyFly is integrated under the hood of Bulldozer. New technologies in composite materials allowed us to produce ultra thin tips which are extremely flexible and very strong. Crazy Flex Tips make the kiteboard very comfortable and extremely responsive. They generate much more pop and provide the softest possible landings. You can really load up this board and it just explodes when popping you up in the air. We believe this technology makes kiteboarding even more fun than it ever was. Crazy Flex Tips pushed Kiteboarding to a new level.

Bulldozer is constructed from finest selection tip to tip wood core, which is precisely shaped by a CNC machine. Unique layers of multi axial fiber glass combined with uni directional carbon fibers and 3D ABS rails complete the layup of Bulldozer. High performance stainless steel inserts are extra reinforced, to hold wakeboarding boots in tight, even during the most powered wakestyle tricks. Bulldozer has the wide stance option for more stability when performing freestyle and wakestyle tricks.

Bulldozer is designed for intermediate to advanced riders looking for a high performance freestyle board with loads of pop.

Bulldozer comes complete with dual density EVA pro footpads, Quick Fix II footstraps, handle and G10 fins.

# GIRLS

Specially designed for girls

132 x 39

## SELECTOR:

FREERIDE:

FREESTYLE:

WAVE:

RACE:

LIGHTWIND:

## BOARD BENEFITS:

>> Freestyle board for Girls competition, specially designed for Hannah Whiteley

>> Very flexy soft board for comfortable soft landings

## GIRLS HANNAH WHITELEY PRO:

We believe that Hannah's results on this board speak for itself very clearly. Based on Hannah's results this board proved to bring the highest level of performance in the top class world competitions such as PKRA, KPWT and BKSA. Girls Hannah Whiteley Pro 2011 is therefore one of the world's best boards in the range of Girls high performance freestyle boards.

Hannah's board is build with a strong CNC shaped tip to tip wood core enhanced with carbon fiber reinforcements, which give the board a lot of pop. Multi axial fiber glass allows the tips to flex and provides comfortable landings. Sum it up all together and you get an amazing board for Girls freestyle competitions and aggressive riding with a beautiful Girls design. To finish up strong as Hannah we gave the board some sparkling glitters to celebrate her victories.

This board is designed for Girls who are looking for a high performance freestyle board with a lot of pop.

Comes with reinforced stainless steel inserts, dual density EVA pro footpads, Quick Fix II S-size footstraps, handle and G10 fins.

## GIRLS:

Comfort, style and performance are the ground base of the Girls board. It has always been specially designed for girls with proper adjustments to fit the most beautiful group of riders.

Girls board is quite unique in its details. It has narrower stance width, blue footpads, blue G10 fins and S - size footstraps. This board has a flashy design and the glitter paint makes it even more special when it sparkles on the sun like diamonds. As a cherry on the top, the board has slightly transparent wood which shows the build quality and looks very attractive.

Girls board is not only special in the design, but also in the construction. Combination of finest selection tip to tip CNC shaped wood core, multi axial fiber glass and ABS rails create a great balance of flex, stiffness and pop. Softer flex provides very smooth and comfortable riding, soft landings and eats up chop very well.

Girls board is equipped with reinforced stainless steel inserts, dual density EVA pro footpads, Quick Fix II S-size footstraps, handle and G10 fins.

# ALLROUND

## High quality for reasonable price

If you are looking for a high quality kiteboard which performs well, looks cool, and remains at a very attractive price level, then Allround 2011 is your best choice.

Allround is a very comfortable board with soft flex, great upwind ability and quite a lot of pop. It is constructed from three main elements, namely, finest selection tip to tip CNC shaped wood core, multi axial fiber glass and ABS rails. These three elements of highest quality enable this board to deliver amazing performance on water. Allround construction is designed to fit a wide range of riders starting with beginners and finishing with intermediate riders. This is the reason why so many kiteboarding schools use this board.

This year's design features transparent wood, brand new CrazyFly logo, extremely glossy finish and some sick graphics. The board is equipped with dual density EVA pro footpads, Quick Fix II footstraps, handle and G10 fins.

### BOARD BENEFITS:

>> This board is suitable for beginners and schools as well as intermediate riders

>> Fiber glass construction makes the board soft and very comfortable

# CRUISER

>> rider: boris.judin

## Light wind machine

Cruiser was, is, and always will be a light wind machine. The name of this board explains it all. Cruising around, having fun and enjoying the ride even in the lightest winds. Of course, this board can handle a lot more than that.

Due to its unique core construction combined with extremely light layers of carbon, Cruiser Pro can also be ridden with some amount of aggression. Very well balanced medium flex of this board suits intermediate and advanced riders. Board rides comfortably in choppy waters, has flat rocker and narrower tips which make it an incredible light wind board.

Cruiser has the lightest and strongest wood core reinforced with carbon, which makes the board very light even at its bigger sizes. It is equipped with ultra thin three centimeters G 10 fins for low water drag. Excellent upwind abilities and comfort are other major benefits of Cruiser.

This board comes complete with reinforced stainless steel inserts, dual density EVA pro footpads, Quick Fix II footstraps, handle and G10 fins.

# THUNDER

## Agility and response in waves

CrazyFly 2011 wave boards come in 5'5" and 6'2" sizes. It has a construction of a real surf board. High density EPS core reinforced with wood on the deck are the most balanced combination for the best wave riding experience. Real surf rails tucked under edge make it easy to hold carves perfectly, whether it is a sharp one or a wider one.

Flat rocker and concave bottom generate superior rocket like glide to make you feel like a flying bullet. Unlike a real bullet, this one is under control. Due to its smaller size it is suitable for powered agile turns and easy jumps. This wave board is one of the lightest and most durable products on the market.

It comes with one piece EVA pro footpad with heel step, symmetrical straps, and three minituttle carbon fins.

# BOARD TECHNOLOGY

## >> Crazy Flex Tips

Brand new concept of ultra thin tips on twin tip kiteboards developed by CrazyFly. Crazy Flex Tips technology is something you have never experienced before. They generate much more pop and provide the softest possible landings.

## >> Pro Comp Pads and Straps

This year we have developed brand new Pro Comp Pads and Straps for maximum lock in. Narrow footpad shape and wide footstrap shape create a feeling of riding in wakeboard boots. Therefore they are very suitable for free style and wake style. Only available with Pro Tour Model.

## >> Raptor LTD – Double Concave

Raptor Limited edition is a brand new high performance freeride & freestyle board in CrazyFly's range. This board has a unique double concave shape combined with full carbon construction and strong tip to tip wood core, which provide amazing control of flex, stiffness and pop.

## >> CNC Shaped Wood Core

Core is one of the most essential elements in every kiteboard and we are very aware of this fact. CNC Shaped Wood Core is very unique. It is made out of a special Thai exotic wood and its main properties are ultra light weight and extreme flexibility. CNC Shaped Wood Core is a part of every CrazyFly kiteboard.

### >> Ultimate Diamond Grip

All 2011 CrazyFly pads have a brand new diamond grip technology. The diamond grip concept is based on a combination of the main diamond shaped channels for water outflow and the micropores which direct water into the main channels.

### >> Carbon Fiber construction

Based on our ten years of experience in building high quality kiteboards with top performance, we simply believe that carbon fibers are irreplaceable. Carbon fiber is ultra light and at the same time extremely strong. These are the reasons why carbon fiber is used in CrazyFly kiteboards, which are expected to be light, very responsive and have a lot of pop.

### >> Multiaxial Fiber Glass construction

Fiber glass construction is mainly used for softer and comfortable boards designed for freeride. This technology offers extreme flexibility and comfort. Due to multiaxial fibers the board has more flex in torision and still remains very strong, as the fibers reinforce it in multiple directions.

### >> Light Weight Dual Density EVA Pads

In CrazyFly, we do not simply follow fashion trends on the market. We produce highest quality products for kiteboarding to give users the most benefits. High quality and durability go hand in hand and our Light Weight Dual Density EVA Pads are not an exception. This has been tested and proved over a long period of time and that is why we offer them to you.

# BOARD SPECIFICATIONS

## >> Pro Tour Model

SIZE: 125x41 130x40 134x41  
 WEIGHT: 2.4 kg 2.4 kg 2.6 kg  
 STIFFNESS: 1050 1000 1050  
 STANCE: 42 / 46 / 50 cm

FLEX: VERY STIFF, CRAZY FLEX TIPS  
 STRAPS: PRO COMP / QUICKFIX II  
 PADS: PRO COMP / DUAL DENSITY  
 FINS: 5 cm G10  
 CORE: CNC WOOD TECH II

CONSTRUCTION: NANO CARBON TECH II  
 BOTTOM SHAPE: CONCAVE  
 SCOOP ROCKER: SPEED,  
 RIDING STYLE: NEW SCHOOL, FREESTYLE

## >> Raptor Pro

SIZE: 127x38 127x40  
 WEIGHT: 2.3 kg 2.4 kg  
 STIFFNESS: 750 750  
 STANCE: 38 / 42 / 46 cm

SIZE: 132x39 132x41 132x43  
 WEIGHT: 2.4 kg 2.5 kg 2.6 kg  
 STIFFNESS: 740 740 760  
 STANCE: 38 / 42 / 46 cm

SIZE: 137x41 137x43  
 WEIGHT: 2.6 kg 2.7 kg  
 STIFFNESS: 740 750  
 STANCE: 38 / 42 cm

FLEX: MEDIUM, CRAZY FLEX TIPS  
 STRAPS: QUICKFIX II  
 PADS: DUAL DENSITY  
 FINS: 5 cm G10  
 CORE: CNC WOOD TECH II

CONSTRUCTION: NANO CARBON TECH II  
 BOTTOM SHAPE: CONCAVE  
 SCOOP ROCKER: SPEED  
 RIDING STYLE: FREESTYLE, FREERIDE

## >> Girls HW Pro

SIZE: 132x39  
 WEIGHT: 2.5 kg  
 STIFFNESS: 570  
 STANCE: 38 / 42 cm

FLEX: MEDIUM  
 STRAPS: QUICKFIX II SMALL  
 PADS: DUAL DENSITY  
 FINS: 5 cm G10  
 CORE: 3T CNC WOOD

CONSTRUCTION: UD CARBON / FIBER GLASS  
 BOTTOM SHAPE: CONCAVE  
 SCOOP ROCKER: MEDIUM  
 RIDING STYLE: GIRLS FREESTYLE  
 COMPETITION

## >> Raptor Pro LTD

SIZE: 132x41 136x41  
 WEIGHT: 2.5 kg 2.6 kg  
 STIFFNESS: 800 750  
 STANCE: 38 / 42 / 46 cm
