

CRAZYFLY

**2015
& KITES
BOARDS**

ONE WORLD.

INTRO

2015

Developing the 2015 product range was the most enjoyable so far. Our new and still fresh eco-friendly factory has given us unlimited technological options to explore and we took full advantage of these opportunities. I am extremely proud with our achievements on the Elite board – the lightest serial production board, and the Shox Gren board – the most eco-friendly board.

The surfboards also kept us busy, and we are more than happy to present you our brand new surfboard range. Seven completely new boards and they are better than ever. We worked on these boards for over two years, so the shapes are well tuned, the boards are light, and the construction is rock solid.

On the kites, we focused on details and have done a lot of fine tuning. We managed to implement original CrazyFly one pump valves, Turbo inflate/deflate system and O-rings instead of pulleys. The Sick bar has also undergone a major change – the central line is now covered in a PU tube to complete prevent wear and bring more comfort for the riders.

Overall, based on our results, CrazyFly is becoming a much stronger and more recognizable brand than ever.

I would like to personally thank every one of our partners for your continued support.

Looking forward to another great season together.

JOZEF BUKOVČÁK

general manager
kite designer
board designer

**ONE WORLD.
2015**

MADE IN EUROPE

CRAZYFLY FACTORY AND HEAD OFFICE IN SLOVAKIA

**HAND MADE
WITH PASSION.**

As many people already know, CrazyFly is one of the few brands to have our own production and offices in Slovakia, Europe. Starting and still operating as a family business, the CrazyFly brand has been built around high quality manufacturing in the heart of Europe and exceptional customer service. Last year, we finished building a brand new factory, which once again enabled us to produce state of the art products at a new industry level. We are one of the few brands which can claim that all CrazyFly twin tips, control bars and twin tips accessories are made in our own factory based in Europe. Having our production and R&D department right next to our offices allows us to set new trends on the market and feedback is translated into products very quickly. Sourcing the best materials available from European suppliers also adds to superior quality of our products.

IT'S A FAMILY BUSINESS

KITEBOARDING SINCE 1999

CrazyFly is a family business, founded in 1999 by Jozef Bukovcak. Jozef, the Big Boss, is a sole owner of CrazyFly Kiteboarding, and he is also the main kite designer, board designer and general manager. Jozef and his wife Iveta built the company around the philosophy of high quality products sold at competitive prices and supported with superior customer service. As this philosophy proved successful and time moved on, Jozef's sons were continuously joining the company after graduating. At the moment, Jozef has his wife, three sons, two daughters in law, and one son's mother in law all working in the company.

Kiteboarding is literally our daily bread, so we pride ourselves with what we think is the best customer service in the industry. Having no external financing gives us freedom to go in our own direction and make decisions quickly. It also allows us to set very competitive prices for our products. Because we believe in quality, we have our own factory in Slovakia, which gives us unlimited possibilities for improvements. The new factory is also the most eco-friendly kiteboard production.

Most importantly, we are all doing what we love and we love what we are doing.

**FAMILY THAT
PLAYS TOGETHER,
STAYS TOGETHER.**

TECHNOLOGY

TEJIN TECHNOFORCE™ LASTING DURABILITY, TEAR RESISTANT.

The most technologically advanced ripstop material for a kite canopy. This high density polyester yarn provides for ultra light weight, high tearing strength and long lasting durability.

O-RING DIRECT FEEL, MORE SAFETY.

Say goodbye to pulleys. With the new O-rings, the steering is much more responsive and the kite feels much more direct. The O-rings are more durable than pulleys and will not malfunction with sand, as some pulleys eventually do. The O-rings are swim-proof, as one line runs around the ring while the other one runs through the ring. So, even in a very rare case of the O-ring breaking, the kite is still fully capable of flying. It is our signature to bring out only the highest quality products. The O-rings are made in Italy, by Antal®, a famous sailing brand.

TURBO INFLATE/DEFLATE LESS PUMPING, MORE KITING.

This year, we introduced a brand new Turbo inflate/deflate valve. Inflation and deflation of the kite are made through the same valve. The kite is fully inflated and deflated in seconds. The set ups and pack downs on the beach are shorter, allowing for longer and much more enjoyable kite sessions.

ONE PUMP SYSTEM EVEN PRESSURE DISTRIBUTION.

We have been hard at work to develop our own bulletproof one pump valves and the results speak for itself. The valves are made from the highest quality material available and are manufactured in Europe. These valves are a synonym to long lasting durability. With the new one pump valves the pressure is evenly distributed throughout the kite. They also allow for quicker and easier inflation and deflation.

KEVLAR REINFORCEMENT BULLETPROOF DURABILITY.

The Kevlar reinforcements are highly durable, extremely resistant to abrasion, and very light. These properties make Kevlar the perfect material for kite reinforcements in the most abused areas.

NIFTY BRIDLE SYSTEM 3 IN ONE - WAVE // WAKESTYLE / FREESTYLE

The Nifty Bridle System is a very unique and revolutionary feature invented by CrazyFly. This feature allows the rider to easily switch between three riding modes: wave, freeride/freestyle, and wakestyle. The Nifty allows for changes to be made directly on the Tango's bridle very quickly and easily.

SQUARED WING TIPS DIRECT FEEL, MORE POWER.

Squared wingtips provide for a more direct feel of the kite and more power in the kite. This shape feature also increases the stability of the kite in strong winds.

ROCK SOLID CONSTRUCTION EXTREMELY DURABLE, VERY LIGHT.

Sticking to our tradition of producing high quality products, we sourced only the highest quality Dacron from Germany and Ripstop from Japan for the construction of the 2015 kites. The high weight materials create a strong base for the light weight canopy. All the materials and reinforcements are strategically placed to create a rock solid and durable kite, while maintaining the lightest possible weight for incredible flight characteristics.

ONE WORLD.

SCULP

3m / 5m / 7m / 8m / 9m / 10m / 11m / 12m / 13m / 14m
BLUE / GREEN / ORANGE / SILVER

The Sculp is an incredibly versatile all-around performer, suitable for a wide range of riders and styles. The Sculp delivers consistency in all riding disciplines. Built around a widely popular Flat-Delta platform, the Sculp is smooth and predictable in the air with progressive power delivery through the bar's range of motion. Due to a new bridle system and rock solid construction, the Sculp has a very direct feel and persistent stability. The ease of use is unbelievable, leaving even the most particular riders feeling right at home in no time. Sticking to our tradition of producing high quality products, we sourced only the highest quality Dacron from Germany and Ripstop from Japan for the construction of the 2015 model. The 2015 Sculp is your new weapon for ultimate performance in an all-around kite.

WAVE / WAKE / RIDE

The Tango is a very unique kite with a revolutionary feature invented by CrazyFly: the Nifty Bridle System. This feature allows the rider to easily switch between three riding modes: wave, freeride/freestyle, and wakestyle. The Nifty allows for changes to be made directly on the Tango's bridle very quickly and easily. The different settings on the Nifty bridle system change the flight characteristics of the kite to the extent that it becomes better suited towards the chosen riding style. CrazyFly is the first company to introduce such a feature to the market that allows for three riding style settings on one kite.

CRUZE

15m / 17m

Cruze, the big boys in our kite range, are the dedicated light wind kites, coming in only 15 and 17M sizes. Despite the larger size, the Cruze has only five struts. On the one hand, this makes it very light weight for excellent performance in lower winds. On the other hand, the five strut construction makes the Cruze shape very solid and ensures easy relaunch in light wind and great stability in gusts. The Cruze is also a great alternative for heavier riders. Due to its shape, the kite moves fast in the air and has great upwind performance. The Cruze has a direct feel, does not backstall, and delivers even distribution of power throughout the kite. It comes with 24m flying lines plus 3m and 6m extension flying lines to be added on in ultra light wind conditions. The 6m extension lines make a real difference in those super light sea breezes.

SICK BAR

40cm / 45cm / 50cm / 55cm

AFNOR SAFETY CERTIFICATE
INTERNATIONAL NF S52-503 CERTIFICATE.

For 2015 we introduced major upgrades on the Sick Bar while sticking to its main ideals of simplicity and safety. The main one is covering the central line in a PU (very strong plastic) tube. This new feature provides superior control of on the bar depower and adds to a more direct kite feel. The whole system, as well as the kite power delivery and steering, feel much smoother. A brand new depower trim cleat, originally designed by CrazyFly, is positioned above the PU tube. It is comfortable to reach and very easy to use. This year, we also added a Velcro on the depower trim cleat, so there are no lines flapping around, and everything is in its place. The PU tube also completely eliminated all possibilities of the central line wear. Of course, the Sick Bar is still the one and only bar made in Europe, with all the parts coming from European suppliers only.

PUSH AWAY SAFETY SYSTEM EASY AND QUICK TO TRIGGER.

The quick release has a stainless steel lever mechanism inside, which reduces pressure and makes the safety easier to trigger.

CENTER LINE TUBE NO MORE WEAR AND TEAR.

Covering the central line in a PU (very strong plastic) tube provides superior control of on the bar depower and adds to a more direct kite feel. The whole system, as well as the kite power delivery, feel much smoother.

DEPOWER TRIM CLEAT SIMPLE AND CLEAN.

A brand new depower trim cleat, originally designed by CrazyFly, is positioned above the PU tube. It is comfortable to reach and very easy to use. This year, we also added a Velcro on the depower trim cleat, so there are no lines flapping around, and everything is tidy in place.

BOARDS

CONSTRUCTION

FULL CARBON

HMx-CF CARBON

NANO TECHNOLOGY CARBON FIBERS.

HMx-CF carbon is the most advanced carbon fiber technology. The combination of Nano-technology, carbon nanotube reinforced resin and T1000G carbon fiber create the world's highest tensile strength fiber. Supplied as a prepreg, this carbon always has the perfect ratio of resin spread evenly and creates the best possible molecular bonding. The cohesion between the fibers is improved and allows for incredible strength even at off-axis fiber directions. Expert utilization of the HMx-CF carbon results in an extremely lightweight board with uncompromised power transfer and dynamics.

ELITE

KEVLAR / MULTIAXIAL GLASS

UD KEVLAR

THIN AND LIGHT. YET ROCK SOLID.

Kevlar is a high strength and low weight composite material used in military and space industries. This high-tech material provides extra strength and pop for the boards, which are designed for freestyle and wakestyle.

BULLDOZER / NUKE / GIRLS PRO

SPREAD TOW CARBON

PERFORMANCE MEETS ENDURANCE.

A revolutionary innovation in carbon fabric manufacturing. This brand new carbon weave brings more strength and lighter weight compared to traditional carbon weave.

PRO TOUR MODEL

FULL CARBON

ULTRA LIGHT, ROBUST AND DURABLE.

Based on our thirteen years of experience in building high quality kiteboards with top performance, we simply believe that carbon fibers are irreplaceable. Carbon fibers are ultra light and at the same time extremely strong. This material is very dynamic and it returns instantly to its original shape after being stressed, which provides loads of pop in carbon fiber boards.

**RAPTOR PRO / RAPTOR PRO LTD
CRUISER PRO**

MULTIAXIAL GLASS

MULTIAXIAL FIBER GLASS

STRENGTH IN EVERY DIRECTION.

Due to multiaxial fibers the board has more flex in torsion and still remains very strong, as the fibers reinforce it in multiple directions.

**SHOX CUSTOM / SHOX GREEN / GIRLS
CRUISER LW / ALLROUND
ALLROUND DOUBLE / SKIM**

TIPS

FOUR V TIPS

ULTIMATE WAKESTYLE EXPERIENCE.

The Four V shaped ridges on the tips provide amazing load 'n' pop as well as grip. This feature offers the ultimate wake style experience.

PRO TOUR MODEL / NUKE

HEXA BOTTOM CHANNELS

ULTRA LOAD 'N' POP.

This shape of the board's tips provides ultra load 'n' pop. It also gives the board superior grip and makes landings more comfortable.

BULLDOZER / GIRLS PRO

BOTTOMS

FLATT BOTTOM

IT'S EASY TO GET AROUND.

This bottom shape has superior gliding performance, but does not provide as much grip as the concave shapes.

**CRUISER PRO / CRUISER LW / ALLROUND
ALLROUND DOUBLE / SKIM**

GULLWING DOUBLE CONCAVE

IMPRESSIVE. IN EVERY SENSE.

Gullwing Double concave shape provides amazing control for cutting powered turns and anyone can feel like a Pro in making transitions. This deep concave offers much more grip for upwind, difficult landings and generates more power when loading a jump.

ELITE / RAPTOR PRO LTD

SINGLE CONCAVE

SMOOTH CARVING.

Concave bottom and Synergy Sidewalls make carving and transitions smooth. The board is very stable and easier to control.

RAPTOR PRO / GIRLS

DOUBLE U CONCAVE BOTTOM

MORE UPWIND, DOUBLE COMFORT.

Double concave shape provides amazing control, eats up chop and the board gains better upwind performance. This shape offers better stability in difficult landings.

**PRO TOUR MODEL / SHOX CUSTOM
SHOX GREEN / NUKE**

QUATTRO CONCAVE

SUPERIOR EDGING AND COMFORT.

The Quattro concave shape provides superior edging, comfort, and softest landings.

ELITE

132 x 41 / 136 x 41 / 140 x 42

CrazyFly is redefining the future of the ultimate kiteboard. Blending together the most advanced technologies and materials while focusing on the best possible performance, we created the Elite. It displays the sensuality of high performance and possesses the elegance of pure, uncompromising design. The Elite is a masterpiece of extreme light weight engineering and demonstrates the outstanding expertise of CrazyFly in all areas of carbon fiber technology.

The Elite is more than a board, it is a status. To complement its superiority, the Elite board comes in a one of a kind custom tailored hard case. This unique boardbag has been designed to always keep the Elite board safe during travels and trips to the beach.

The Elite package guarantees many pleasant surprises and unparalleled riding joy.

Performance wise, the Elite was designed as a high end freeride board. As with every carbon board, the Elite has quite a lot of pop and dynamics, so the load 'n' pop will not dissappoint. The Elite is very different when compared to a traditional full carbon board. Even though it is a full carbon board, it does not feel too stiff at all. Because the HMX-CF carbon is so strong, we were able to use only one layer on each side, and the board remains highly flexible, giving the Elite a very comfortable medium flex. Due to its extreme light weight, it is very simple to manoeuvre and thanks to the shape, it handles chop extremely well. Overall, the Elite beats just about any other board we have made so far.

PRO TOUR MODEL

136 x 41 / 139 x 41

The Pro Tour is the freestyle machine in CrazyFly's range. Changing with the trends, the Pro Tour has inserts lined up in the center, so it is compatible only with wake bindings. Innovative materials of the highest quality are employed - such as Spread Tow Carbon and Kevlar reinforcements - and our focus is on perfectionism. This year, we have added four sharp V shaped ridges on the tips, for ultimate load 'n' pop, as well as grip.

The Pro Tour is a stiffer board with explosive pop, so that you can really commit and load it for new school freestyle tricks and nail them with ease and style. It offers centrally lined inserts for ultimate wake bindings set up. Complementing the package, 3.0 cm G10 fins enhance speed and ensure early planning.

The Pro Tour also utilizes a superb technology from the composite materials industry. Spread Tow Carbon Fabric provides more strength at lighter weights than traditional carbon weaves, and spreading the carbon yarn into very thin tapes enables the fabric to be evenly stretched ensuring maximum and consistent strength throughout the board with less weight. We have been working with carbon material for well over 15 years and there is simply no substitute. It's not all about strength though - our designers have also added a slight layer of aluminum powder on the carbon fabric giving it a fancy sparkle in the sun!

The Pro Tour is not suitable for all riders. It is aimed at pros and at advanced riders who are looking for a stiff board with explosive pop. If you know how to treat it though, it will repay you and take your kiting up to the next level: guaranteed.

The Pro Tour Model comes with 3.0 cm G10 fins.

RAPTOR PRO

132 x 39 / 132 x 41 / 132 x 43 / 135 x 41 / 135 x 43 / 137 x 41 / 137 x 43 / 140 x 42

Raptor Pro is a living legend in our range. This board has been fine tuned for nine years and it has always stuck to its core features: full carbon and full wood core construction with single concave bottom. Due to these factors, the Raptor Pro has always been extremely well balanced and is a true all-around performer. This traditional board has always kept its true face and it still rocks.

Even though the Raptor Pro is more traditional in its design, the technologies and materials employed for the construction of this board are innovative and fresh. Full carbon layup and the highest quality CNC shaped 3T wood core create a dynamic, light and extremely comfortable high-end board.

The Raptor Pro is suitable for high performance freeride and can be really pushed hard for powered freestyle tricks. The Raptor Pro is aimed at intermediate, advanced and pro riders who are looking for a high performance board for committed carving and an insane amount of pop for their tricks.

Razor fins with ultra thin profile will further enhance the speed and early planing, and the Raptor Pro also boasts an enviable carbon fiber look, and special 3D metallic colors.

The Raptor Pro comes complete with Dura footpads, Quick Fix II footstraps, a handle and Red Razor fins.

RAPTOR PRO LTD

132 x 41 / 136 x 41 / 140 x 42

This board does not need much introduction. Raptor Pro LTD is one of the best boards we have ever made. Extremely light full carbon masterpiece with Gullwing Double Concave Channels. Buttery soft in chop, yet dynamic for high end freeride and freestyle. Plus, it is made with high quality materials and top notch engineering.

The Gullwing Double Concave shape combines perfectly with the full carbon construction and strong CNC shaped 3T wood core to provide amazing control of flex, stiffness and pop. Plus, due to the shape, the Raptor LTD just eats up chop and eliminates splash. There's also heaps of grip for ripping upwind and for loading up for jumps.

The Raptor Pro LTD is a highly refined, popular and very well balanced high performance board with stunning design and elegant carbon fiber look. You need one of these.

The Raptor LTD comes complete with Dura footpads, Quick Fix II footstraps, a handle and Razor fins with ultra thin profile.

SHOX GREEN

132 x 41 / 133 x 43 / 136 x 41

We are extremely proud to introduce the most environmentally friendly methods ever in kiteboard production. With help from our supplier, new technologies, and new machinery, we are able to produce the Shox Green edition kiteboard with almost zero waste in production. The production process takes longer, requires more hand work, and is more tedious. However, being in an industry which heavily depends on natural elements, we felt the urge to head in this direction. We are glad we did; the result speaks for itself.

The Shox Green is designed for intermediate, advanced and environmentally cautious riders looking for a very comfortable freeride board. The environmental aspect of this board, did not sacrifice anything in terms of performance on the water. The Shox Green works a treat! Full wood core and a Double U Concave Bottom shape make up for the most comfortable freeride and top notch upwind performance.

The Shox Green comes complete with Dura footpads, Quick Fix II footstraps, a handle and Razor fins with ultra thin profile to enhance the speed and promote early planing.

ENJOY LIFE.

**NEXT
GENERATION.**

BULLDOZER

130 x 41 / 135 x 41 / 140 x 42

Building up on the success of the 2014 Bulldozer, the 2015 Bulldozer remains a freestyle/wakestyle crossover board. On the bottom, the Bulldozer has a Quattro concave in the middle section of the board. The Quattro concave shape provides superior edging, comfort, and softest landings. Towards the tips, the Quattro concave changes into Hexa concave for more stiffness and ultra load 'n' pop. On the top, the Bulldozer received new insert positions and is now compatible with: SEC pads and straps, Dura pads and straps and also with wake bindings.

This board is shaped and constructed to be pushed hard, and it delivers amazing power on the water. We have reinforced the Bulldozer's construction with Uni-directional Kevlar throughout the whole length of the board, which can be seen through the transparent finish. The Kevlar is a high strength and low weight composite and is used in military and space industries. Aside from the Uni-directional Kevlar, the Bulldozer also makes use of Multiaxial Fiber Glass. This construction provides a breathtaking amount of pop without making the board too stiff.

The Bulldozer comes complete with SEC footpads and Straps, Quick Fix II mounting system, Razor fins and a handle.

NUKE

137 x 42 / 140 x 43

Nuke is a dedicated wakestyle board in our range. Mainly designed for wakestyle kiting, the Nuke will not disappoint in cable parks either. With brand new Double concave channels in the center and four sharp V shaped ridges on the tips, this board offers the ultimate wake style experience. Of course, the Nuke is compatible with wake bindings and has the inserts centrally lined up for the ultimate wake experience.

In addition to the new bottom shape, the Nuke offers bullet proof Kevlar construction with extra layers of Multiaxial Fiberglass to take the beating from sliders and kickers. The rocker line is designed for better downwind pop, improved pop off wave kickers, and easier high speed landings. The Progressive Flex Tips technology and the bottom shape also provide extra whip for load 'n' pop tricks. Given the Double concave channels and V shaped ridges on the tips, the Nuke provides loads of grip and also works very well without fins.

The Nuke comes with 1.0 and 3.0 cm G10 fins.

SKIM

135 x 48

The Skim has a straighter outline for improved the low end performance and upwind ability. Skim is a perfect toy for light wind fun and small surf conditions. The strapless set up provides unlimited possibilities for exploring new tricks and stance positions. You can put the fins on, which see the Skim perform very well upwind, even in super lightwind conditions. Or for a nice skatey feel it's equally happy being ridden without fins. The Skim is also great fun in smaller waves, where you can carve them up or use them as kickers for strapless tricks.

Whatever your riding style or level is, the Skim is always fun to play with.

Our Skim board is produced with a full wood core, Multi Axial Fiber Glass construction and ABS sidewalls. This construction provides comfortable medium flex and the flat bottom shape ensures easy early planing.

The Skim board features a beautiful transparent wood core design with funky graphics and comes complete with 3.0 cm G10 fins and a self adhesive EVA footpad so you have the choice of riding strapless with a waxed deck, or with the footpads.

LIGHTWIND.

If you are looking for a high quality kiteboard which performs well, looks cool, and has a very attractive price tag, then the Allround is the board for you. An incredibly comfortable board with soft flex, great upwind ability and a decent amount of pop, the Allround is constructed from three main elements: precisely CNC Shaped 3T Wood Core, Multi Axial Fiber Glass and Synergy side walls. These three high quality elements enable the board to deliver fantastic performance on the water, and the Allround's construction is designed to fit a wide range of riders from beginner through to intermediate. For this reason it's also our most popular board with kiteschools.

The use of Razor fins with ultra thin profile also enhance the speed and provide early planing, and this year's design features transparent paint with fresh graphics and that sick real-wood look.

The board is equipped with Dura footpads, Quick Fix II footstraps, a handle, and Razor fins.

ATV

5'10" / 6'0"

ALL TERRAIN VEHICLE.

Brand new for 2015, the All Terrain Vehicle is the most versatile board in our range. The ATV was designed and developed with Tommy Gaunt, who has been shredding waves all over Australia, Antigua, Cornwall and Scotland, so the board handles a large variety of conditions ranging from small to big waves. With a medium rocker, the ATV planes early and generates speed. Even at high speed, the board has plenty of grip and is easy to handle. This makes it the best choice for riders looking to get into the kitesurfing discipline. The ATV has five fin boxes, so the rider can choose between Thruster and Quad. For more speed and looser feel, Tommy likes to use the Thruster set up, but for more control and powered up turns he prefers the Quad set up. Whatever the conditions are, the ATV is always ready to handle them.

STRAPLESS CLASSIC

5'8" / 6'0"

NEW SCHOOL FREESTYLE.

Completely new for 2015, the Strapless is designed for newschool freestyle strapless tricks, small waves and light wind conditions. This board was designed and developed with the strapless king of Aruba Petr Pechi Pechacek, who is one of the best in this discipline worldwide. The Strapless has a wide outline with the most volume in our range, yet it is also the lightest board in our range, which makes it perfectly suited for strapless airs. The volume, flatter rocker and thruster set up get this board up and going really early even in light wind conditions. With the lightest construction in the range this board actually has flex and works great for small waves. It will also not disappoint for surfing small waves. The strapless feels light, lively and is a lot of fun to ride no matter if the wind and waves are hauling or not. Petr absolutely loves his new Strapless.

5'10" / 6'0" / 6'2"

PURE SURF RIDING.

New for 2015, the Classic is the big wave slayer. Build and designed for big, fast and powerful waves, the Classic has bulletproof construction, making it the strongest board in our range for the toughest conditions. With a slimmer outline and a fast rocker line, the Classic flies down the line in the big surf. It has a rounder tail and a thruster fin set up, and the board offers amazing control when the surf gets bigger and in cross-off conditions. If you want to ride with tons of power in high speed turns with your board under control, then the Classic is your best choice. The Classic will get you on to the wave of the day and give you the control that you need to ride it all the way through to the beach.

All CrazyFly surfboards are made using the custom surfboard production process. Real surfboard rails tucked in under the edge and the latest Bamboo Tech construction provide superior surf feel. In addition, all CrazyFly surfboards come with high quality accessories: self-stick EVA footpads, surf straps, and original Futures® fins made in USA.
