

Kites & Boards 2017

INTRO

2017

It is always exciting to introduce a new product range, but this year, it is hard to find the right words to describe what we have achieved.

Approaching the 2017 season, CrazyFly faced some of the biggest decisions in our company history. And honestly, these were not easy decisions at all. We are extremely proud to announce that all 2017 CrazyFly products are made in Europe. The harder things get, the more rewarding it feels to succeed. Looking back at what we have achieved with the 2017 product range, I feel that bonus reward like never before. This year, we pushed ourselves to go further than the extra mile, which resulted in the best products we have ever made.

I believe making all products in Europe is a historic moment for CrazyFly and for our customers. Yet again, we have become bigger and stronger than ever before.

I would like to personally thank every one of our partners for your continued support.

Looking forward to another great season together.

JOZEF BUKOVČÁK

general manager
kite designer
board designer

ALL MADE IN EUROPE

Brand new CrazyFly kite factory

CrazyFly brand has been built on high quality manufacturing in the heart of Europe and exceptional customer service. We are extremely proud to be the first and only Kiteboarding brand producing all of our products in our own factory based in Europe. In addition to our in-house production of kiteboards, control bars and board accessories, we managed to transfer the kites and surfboards production to Europe.

Having our production and R&D department right next to our offices allows us to set new trends on the market and innovations are applied into products very quickly. Sourcing the best materials available from European suppliers also adds to superior quality of our products.

We are extremely proud to be the first and only Kiteboarding brand to produce inflatable kites in Europe. We believe this deserves special attention.

Our new factory is equipped with the latest high tech machinery such as CNC laser cutting and sewing, high frequency bladder welding etc. The machinery is backed up by highly skilled workers. We are lucky to be based in the suburb of Trencin, which is also known as the city of fashion in Slovakia. Trencin has a long history of premium fashion production dating back to 1907.

With combining our knowledge of kite design, the latest machinery and highly skilled workforce, we were able to achieve numerous innovations and improvements on the 2017 kites construction. The kites themselves are more rigid than ever, which results in unmatched flight characteristics and ultimate durability of the 2017 kites.

Every single kite produced in our factory is made from the latest high performance fabrics, such as Double Ripstop, Dacron, Marcloth, ArpTex etc., and precisely put together with attention to every small detail. Quality of additional materials like PU bladders, Polyester abrasion resistant threads and Dyneema® bridle lines are second to none.

The 2017 kites are truly the best kites we have ever made.

IT'S A FAMILY BUSINESS

Kiteboarding since 1999

CrazyFly is a family business, found in 1999 by Jozef Bukovcak. Jozef, the Big Boss, is a sole owner of CrazyFly Kiteboarding, and he is also the main kite designer, board designer and general manager. Jozef and his wife Iveta built the company around the philosophy of high quality products sold at competitive prices and supported with superior customer service. As this philosophy proved successful and time moved on, Jozef's sons were continuously joining the company after graduating. At the moment, Jozef has his wife, four sons, two daughters in law, and one son's mother in law all working in the company.

Kiteboarding is literally our daily bread, so we pride ourselves with what we think is the best customer service in the industry. Having no external financing gives us freedom to go in our own direction and make decisions quickly. It also allows us to set very competitive prices for our products. Because we believe in quality, we have our own factory in Slovakia, which gives us unlimited possibilities for improvements. The new factory is also the most eco-friendly kiteboard production.

Most importantly, we are all doing what we love and we love what we are doing.

KITES

KITES TECHNOLOGY

Made in Europe.

Starting our own kite factory in Europe opened up unlimited possibilities of material selection and for innovating the kite construction. We looked at the kite construction from scratch and came up with never before seen innovations. The innovative construction is put together from latest high performance fabrics, such as Double Ripstop, Dacron, Marcloth and ArpTex.

SINUSOID TRAILING EDGE

This year, we have completely re-designed the trailing edge. Instead of using a straight stripe of extra ripstop, we created a much stronger Sinusoid Trailing Edge made from Marcloth. The sinusoid shape evenly spreads tension and reduces flap. This results in a much stronger and more solid trailing edge.

ARPTX

ArpTex sits at the top of abrasion resistant polyamide textiles. This high tech fabric made in Italy can handle plenty of abuse without getting damaged. The official number is 100 000 contacts with abrasive surface before the material starts deteriorating. This is why we selected ArpTex as the most suitable material to protect CrazyFly kites in the most abused areas.

SWEPT LEADING EDGE SEAM

By challenging the traditional kite construction for improvements, we came up with the swept leading edge seam. The leading edge seam on the wingtips of the kite is swept higher towards the canopy where it has less influence on airflow. This allows for higher aerodynamic efficiency and more precisely controlled kite.

DACRON SHIELDS

Brand new this year, we introduced large Dacron shields to reinforce stress joint areas on the kite and also to protect these areas from wear. Unlike 3D shaped plastic protectors which are not aerodynamic, the Dacron Shields are snug and allow for efficient airflow. Dacron is highly resistant to abrasion and increases the kite's durability.

LINKED BRIDLE

Brand new for 2017 kites, the Linked Bridle does not have any pulleys nor sliders. It creates a direct link between the rider and the kite, resulting in faster kite reactions and more controlled handling. The Linked Bridle is also much more durable than conventional bridles, as it reduces bridle line movement and abrasion to minimum.

TWO IN ONE LEADING EDGE

We narrowed down the number of panels by nearly 50% on all our kites. Because the material itself is always stronger than a seam, having less panels and less seams results in a much stronger leading edge. Less seams also increase precision of the leading edge shape, as seams can cause a small misalignment. The two in one leading edge is the most precise and the strongest leading edge till date.

UNITED DACRON PANEL

This revolutionary feature increases the kite's rigidity and reactivity allowing for better flight experience. Every seam on the kite gets stretched over time, especially in the stressed area pulled by the backlines. So, instead of using multiple Dacron panels, we used a single United Dacron Panel. The reactions of the kite are noticeably quicker and they do not fade over time.

SYNERGY STRUT BOND

Another upgrade this year is the Synergy Strut Bond, in other words, how the struts connects to the canopy of the kite. Instead of a single attachment seam, we connected the strut to the canopy with two parallel seams, creating the ultimate synergy between the strut and the kite. This synergy noticeably improved how the kite generates power during turns and kiteloops and how it holds its shape during flight.

DOUBLE RIPSTOP

The most technologically advanced ripstop material for a kite canopy. This high density polyester yarn provides for ultra light weight, high tearing strength and long lasting durability. This year, the Double Ripstop has a brand new coating which increases strength by 30% and minimizes stretching of the material. The new Double Ripstop is lighter, has the same tearing strength in all directions, and allows 30% less air through itself.

TURBO INFLATE/DEFLATE

All CrazyFly kites are equipped with Turbo inflate/deflate valve. Inflation and deflation of the kite are made through the same valve. The kite is fully inflated and deflated in seconds. This year, the Turbo valve has a new cover made from ArpTex, which does not intake water and does not add weight to the kite.

STRUT END PROTECTION

The strut ends are one of the most abused areas, mainly when carrying the kite inflated on the beach, or during self launches. The strut ends are strategically reinforced with Arptex material, which sits at the top of abrasion resistant polyamide textiles.

CNC CUTTING & SEWING

CNC controlled laser cutting ensures maximum precision of all kite panels and results in accurate kite shapes. CNC controlled laser cutting also reduces waste of offcut material. CNC controlled laser sewing is used for critical and difficult seams on all CrazyFly kites. This technology eliminates human error and enables perfection to be repeated on every seam.

WINGTIP ELBOW

The Wingtip Elbow construction is stronger than ever with brand new Dacron reinforcements on the inside and Marcloth lining on the outside. Plus, the Swept Leading Edge Seam is placed in the direction in which the elbow was bending the most. These factors minimize the elbow movement, so the kite is more compact, has higher aerodynamic efficiency and better handling.

LIGHT WEIGHT ZIPPER

Unlike on other kites, we selected a slimmer Lightweight Zipper covered with webbing to prevent sand from getting stuck into the zipper. This results in flawless function of the zipper, saves weight on the kite and overall looks much cleaner than a big heavy uncovered plastic zipper.

ONE PUMP SYSTEM

The One Pump System allow for quicker and easier inflation and deflation of the kite and ensure even pressure distribution throughout the kite. The valves are made from the highest quality material available and are manufactured in Europe. Brand new this year, the one pump hose clips are covered with Arptex, which unlike Neoprene does not intake water which reduces weight.

STRUT JUNCTION

We have completely changed how the strut is connected to the leading edge. The connection is now stronger, cleaner and straighter without unwanted material folds, which cause quicker wear. The whole junction is reinforced with Arptex material for ultimate strength and durability.

BUILT-IN PUMP LEASH

The Pump Leash is one piece with the central strut reinforcement. Instead of sewing the pump leash on the kite separately, which creates a point of weakness on the leading edge, we opted for creating the pump leash from the central strut reinforcement.

SNOW & SAND PROTECTOR

The Snow & Sand Protectors on the leading edge protect the kite from damage caused by dragging the kite on snow or land when launching or relaunching the kite.

SOFT LEADING EDGE END

Towards the end, the leading edge diameter has been optimized and decreases to prevent the bladder slipping out of the kite under pressure. The inside of the leading edge end is lined with a softer version of Arptex to create a cushion for the bladder and prevent any damage to the bladder during a kite crash. On the outside the Leading Edge Ends are protected with Arptex, the latest abrasion resistant polyamide textile from Italy.

MARCLOTH FUSION LINING

Our engineers use Marcloth to strengthen all areas where the heavy duty kite frame materials meet the lightweight canopy. Marcloth is a mid-weight high strength fabric, ideal to create the ultimate fusion between the higher weight and lighter weight fabrics. All transitions between the frame and canopy are in round shapes, rather than sharp angles and straight lines, as the round shapes spread tension more evenly. Of course, this increases the durability of the kite.

BACK LINES TUNING

There are three back line settings on the wingtip of the kite. These allow the rider to tune the kite to his or her preferences. The fast back line set up provides the quickest turning of the kite and the lightest bar pressure. On the medium setting the kite still turns relatively quickly and there is more load on the bar. On the slow setting the kite turns noticeably slower and the bar pressure is high.

CUSTOM COLORS

All 2017 CrazyFly kite colors are custom developed shades supplied exclusively to CrazyFly only.

SCULP

The 2017 CrazyFly Sculp is a versatile all-around performer, suitable for a wide range of riders and styles. It delivers consistency in all riding disciplines and offers incredible wind range and ease of use.

For 2017, we have completely re-worked the Sculp, as it is now made in our own factory in Europe, which opened up unlimited options for improvements and innovation. Shape wise, the Sculp now has a higher aspect ratio, which makes the kite slimmer and much faster. This also results in a more Delta shape which offers smooth, stable, and predictable flight with progressive power delivery.

By challenging traditional kite construction, we came up with numerous innovations and improvements on the 2017 Sculp. From a brand new Double Ripstop, to 50% less panels on the leading edge, through to the last single detail. The 2017 Sculp raves with improvements and innovation and truly is the best Sculp we have ever made.

The 2017 Sculp - One world, one kite.

One world. One kite.

KITE SELECTOR

FREERIDE / FREESTYLE

TANGO

The 2017 Tango is a high performance freeride and wave kite for advanced to expert riders. The Tango is a modern open C-shape kite with lots of pull, power and pop. The new Tango loves boosting and floaty jumps with amazing hang time. It turns quickly with predictable power and moves exactly where the rider wants it to go. Powered kite loops come with ease, plus the Tango provides amazing upwind abilities.

For 2017, we have completely re-worked the Tango kite construction, as it is now made in our own factory in Europe, which opened up unlimited options for improvements and innovation. Starting with the canopy material, we use the latest Double Ripstop. The new Double Ripstop is lighter, has the same tearing strength in all directions, and is more airtight.

By challenging traditional kite construction, we came up with numerous innovations and improvements on the 2017 Tango. From a brand new Double Ripstop, to 50% less panels on the leading edge, through to the last single detail. The 2017 Tango raves with improvements and innovation and truly is the best Tango we have ever made.

PERFORMANCE FREERIDE / WAVE

CRUZE

The 2017 Cruze is a dedicated lightwind kite in our range coming only in 15, 17 and 19m sizes. With a Flat-Delta shape, deep profile, and high aspect ratio, the Cruze generates a lot of power even in marginal wind conditions.

Despite its larger size, the Cruze maintains the agility of a smaller kite thanks to its shape. The squared wingtips ensure stability as well as quick and precise turning for a kite of this size. To maximize performance in the lightest sea breezes, we stripped down weight wherever possible without sacrificing the rigidity of the kite. Simple bridle and rock solid construction result in a very user friendly light bar feel. By challenging traditional kite construction, we came up with numerous innovations and improvements on the 2017 Cruze. The canopy is now made from the latest Double Ripstop. It is lighter, has the same tearing strength in all directions, and is more airtight. Regardless of its light wind nature, the Cruze works great for heavier riders looking for a powerful freeride kite and boosting sessions.

The Cruze delivers consistent power with ultimate upwind capabilities for the best light wind experience.

The 2017 Cruze, light wind special.

Light wind special.

SICK BAR

Simple and clean.

AVAILABLE SIZES:
40cm / 45cm / 50cm / 55cm

PREMIUM LEATHER GRIP

Brand new outdoor performance premium leather grip from Italy provides unmatched comfort and long lasting durability.

PUSH AWAY SAFETY SYSTEM

The safety system has a stainless steel lever mechanism inside, which reduces pressure and makes the safety easy to trigger with low force. Engaging the safety system ensures 100% collapse of the kite in all situations. With the Sick Click feature, the safety system is not only easily triggered, but quickly assembled back together.

POWER TUBE

No more wear and tear. Covering the central line in a PU (very strong plastic) tube provides superior control of on the bar depower and adds to a more direct kite feel. The whole system, as well as the kite power delivery, feel much smoother.

FULL CARBON

Full carbon monocoque one piece bar. Is made from high modulus aerospace carbon fibers which are extremely strong, durable and ultra light. This bar is produced with latest high tech molding processes.

NEW BAR ENDS & FLOATERS

With safety being the top priority, the new bar ends are not made from hard plastic, but hard rubber which causes less damage during impacts with the user. The new bar ends are short and topped with injection molded EVA floaters, which are comfortable to hold when re-launching the kite.

GERMAN LINES

All CrazyFly lines are top quality low stretch Liros® lines made in Germany. Unlike others, when a CrazyFly line is pulled, the kite reacts instantly. Traditional lines stretch when pulled and the reactions of the kite are slow and require more input from the rider. With CrazyFly lines, steering is direct and requires very light input from the rider. The kite is much easier to control.

HEXA

The Hexa Binding provides unlimited adjustability to accommodate all foot shapes and sizes, while offering unmatched comfort and board feel.

All the adjustments on the Hexa Binding can be quickly and easily made for the ultimate rider-board connection. The Hexa footpad can be moved in six directions: up and down, left and right, and also angled clockwise and counter clockwise.

The Hexa footstrap offers a wide range of adjustments of the footstrap size, which can be easily and quickly made. It can be adjusted on four points for the best possible fit. The range of adjustability also allows for comfortable use of neoprene boots. The footstrap position can also be adjusted via the Quattro Stix, which allow the footstrap to be moved towards the heel or towards the toes.

In addition to all the adjustments, there is also a Heel Suspension Infix with triple density EVA foam.

Our designers were hard at work to create the best possible ergonomic fit and hand picked premium materials for long lasting durability and luxurious comfort. The outdoor performance leather from Italy on Hexa footstraps is extremely resistant to abrasion, sun rays and salt water. On top of premium materials, the Hexa Binding is made in Europe, in the CrazyFly factory.

The Hexa Binding - unlimited adjustments and luxurious comfort.

Unlimited adjustability.

ELITE

CrazyFly is redefining the future of the ultimate kiteboard. Blending together the most advanced technologies and materials while focusing on the best possible performance, we created the Elite. It displays the sensuality of high performance and possesses the elegance of pure, uncompromising design. The Elite is a masterpiece of extreme light weight engineering and demonstrates the outstanding expertise of CrazyFly in all areas of carbon fiber technology.

The Elite is more than a board, it is a status. To complement its superiority, the Elite board comes in a one of a kind custom tailored hard case. This unique boardbag has been designed to always keep the Elite board safe during travels and trips to the beach.

The Elite package guarantees many pleasant surprises and unparalleled riding joy.

Performance wise, the Elite was designed as a high end freeride board. As with every carbon board, the Elite has quite a lot of pop and dynamics, so the load 'n' pop will not disappoint. The Elite is very different when compared to a traditional full carbon board. Even though it is a full carbon board, it does not feel too stiff at all. Because the HMX-CF carbon is so strong, we were able to use only one layer on each side, and the board remains highly flexible, giving the Elite a very comfortable medium flex. Due to its extreme light weight, it is very simple to manoeuvre and thanks to the shape, it handles chop extremely well. Overall, the Elite beats just about any other board we have made so far.

Status defined.

ADDICT

During its first year, the Addict has become very popular in our board range thanks to its modern eye-catching shape. It is truly a board that stands out on and off the water. The Addict is a freestyle wakestyle crossover board for advanced to expert riders.

It is designed and constructed to push the limits. Right Angle Channels on the tips and Edge Control Track provide plenty of grip. Riding the Addict without fins makes it ideal for hitting kickers and sliders while kiting, or at cable parks. The board is equipped with 3.0 cm Razor fins for the ultimate grip if required.

Construction is rock solid and can take plenty of abuse. The X carbon, Kevlar, and optimized flex provide explosive pop while the larger rocker makes landings incredibly smooth. Light Up sidewalls are stronger and lighter than ever with an attractive color changing look.

The Addict has a flat deck and works best with wake bindings. It is also compatible with Hexa Bindings.

The Addict is an absolute top class freestyle wakestyle crossover and simply an amazing board to ride.

It's addictive.

RAPTOR

Last year the Raptor received a complete makeover and it flew of the sales chart and immediately became our top seller.

The Raptor is a freeride freestyle high performance board for intermediate to advanced rider level, it will bring never before experienced ride feelings. Thanks to a Multi Channel bottom shape and V tips, the Raptor has the perfect balance between speed and grip. The Step Cap deck technology allows for thinner rails for ultimate edging and amazing upwind.

For 2017, we introduced a brand new Nano Glide Skin on the bottom of the board. The micro channels on this foil help the board track and go upwind better. The foil has better gliding properties and generates speed quicker, plus it is more reluctant to scratches. The top of the board has a brand new matt overprint for that eye catching premium look.

Raptor's construction layup combines multi axial fiberglass and brand new X carbon. This construction is a little bit softer than the previous Raptor boards, making it more comfortable. The X carbon provides for plenty of pop to pull off tricks. Light Up sidewalls are stronger and lighter than ever with an attractive color changing look.

Experience future now.

SHOX GREEN

The 2017 Shox Green is the ultimate upwind machine and the most comfortable freeride board in our range for intermediate to advanced riders.

We are extremely proud to offer the most environmentally friendly kiteboard. With help from our supplier, new technologies, and new machinery, we are able to produce the Shox Green edition kiteboard with almost zero waste in production.

The Shox Green takes advantage of Multi Channel bottom shape and Concave Tips which provide unmatched upwind performance

and increase the overall all-round abilities of the board. Step Cap deck technology allows for thinner rails and sharper edging. The construction layup combines Recycled fiberglass and X carbon on the deck for a dynamic feel and optimized pop.

The environmental aspect of this board, did not sacrifice anything in terms of performance on the water. The Shox Green works a treat! Full wood core and the Multi Channel Bottom shape make up for the most comfortable freeride and top notch upwind performance.

Ultimate freeride comfort.

The 2017 Bulldozer is a freestyle/wakestyle crossover board for intermediate to expert riders. On the bottom, the Bulldozer has a Quattro concave in the middle section of the board. The Quattro concave shape provides superior edging, comfort, and softest landings. Towards the tips, the Quattro concave changes into Hexa concave for more stiffness and ultra load 'n' pop.

This board is shaped and constructed to be pushed hard, and it delivers amazing power on the water. We have reinforced the Bulldozer's construction with Uni-directional Kevlar throughout the whole length of the board. The Kevlar is a high strength and

low weight composite and is used in military and space industries. Plus, we added a Spread Tow Carbon reinforcement in the center of the board to increase the board dynamics and pop. Aside from the Kevlar and Carbon, the Bulldozer also makes use of Multiaxial Fiber Glass. This construction provides a breathtaking amount of pop without making the board too stiff. Brand new Light Up sidewalls are stronger and lighter than ever with an attractive color changing look.

The Bulldozer is compatible and works great with both Hexa Bindings and wake bindings. The board is equipped with brand new 3.0 cm Razor fins for the ultimate grip if required.

FREERIDE / FREESTYLE

GIRLS

Comfort, style and performance are the building blocks for a functional girl specific board. Our Girl's board has always been specially designed for girls - with an appropriate construction and proper adjustments to suit the needs of girl kitesurfers.

For 2017 the Girls board was completely redesigned. The brand new Multi Channel bottom shape and Concave Tips provide unmatched upwind performance and increase the overall all-round abilities of the board. The new Step Cap deck technology allows for thinner rails and sharper edging.

The Girls board is a very comfortable freeride board customized for the ladies. Not only the graphics, but the construction, insert position and straps are all customized for girls. Construction wise we source the finest selection of tip-to-tip CNC Shaped Wood Core, Multi Axial Fiber Glass and Light Up side walls to create a great balance of flex, stiffness and pop. A slightly softer flex pattern provides smooth and comfortable riding, soft landings and eats up chop very well.

The Girl's board is designed for intermediate and advanced riders looking for a comfortable freeride board with enough pop to nail tricks.

This is love.

CRUISER

Cruiser is a light wind machine with proven shape and construction. The name sums it up perfectly: Cruising around, having fun and enjoying the ride even in the lightest winds. But of course, this board can handle a lot more than that... Due to its unique core construction and extremely light layers of carbon, the Cruiser can also be seriously abused. The very well balanced medium flex of this board suits intermediate and advanced riders, it rides comfortably in choppy waters and the flat rocker and squared outline ensure that it is an incredible lightwind board.

The **Cruiser** has the lightest and strongest wood core in our entire range, which is reinforced with carbon ensuring that the board is very light - even in the bigger sizes.

The **Cruiser LW** has asymmetric fins position. The fins are positioned on the heel edge of the tips and in the center of the heels. Due to the asymmetric fin position, the fins stay in the water all the time and provide better upwind ability of the Cruiser LW.

Cruiser Double features inserts positions for two sets of bindings. As the name suggests, the Cruiser Double can take two riders on board at the same time. A great tool for introducing newcomers to kiteboarding and for sharing our beautiful sport.

Light wind machine.

ALLROUND

New ride, good old price.

AVAILABLE SIZES:
 135 x 40 / 138 x 40 / 138 x 43
 145 x 42 / 145 x 44 / 145 x 48

For 2017, we have completely redesigned the Allround and also the Allround bindings. If you are looking for a high quality kiteboard which performs well, looks cool, and has a very attractive price tag, then the Allround is the board for you.

The Allround received a brand new outline and single concave bottom. The tips are now more squared providing a larger surface area for better upwind performance while the single concave bottom provides more comfort and makes the Allround a much smoother ride.

The Allround is an incredibly comfortable board with soft flex, great upwind ability and a reasonable amount of pop, the Allround is constructed from three main elements: precisely CNC Shaped 3T Wood Core, Multi Axial Fiber Glass and Light Up side walls. These three high quality elements enable the board to deliver fantastic performance on the water, and the Allround's construction is designed to fit a wide range of riders from beginner through to intermediate.

SKIM

Let the fun begin.

AVAILABLE SIZE:
 135 x 48

The Skim has a straighter outline for improved the low end performance and upwind ability. It is a perfect toy for light wind fun and small surf conditions.

The strapless set up provides unlimited possibilities for exploring new tricks and stance positions. You can put the fins on, which see the Skim perform very well upwind, even in super lightwind conditions. Or for a nice skatey feel it's equally happy being ridden without fins. The Skim is also great fun in smaller waves, where you can carve them up or use them as kickers for strapless tricks.

Whatever your riding style or level is, the Skim is always fun to play with.

Our Skim board is produced with a full wood core, Multi Axial Fiber Glass construction and Light Up sidewalls. This construction provides comfortable medium flex and the flat bottom shape ensures easy early planning.

The Skim board features a beautiful transparent wood core design with funky graphics and comes complete with brand new 3.0 cm Razor fins and a self adhesive EVA footpad so you have the choice of riding strapless with a waxed deck, or with the footpads.

SURFBOARDS MADE IN EU

High quality handmade boards.

Another big step this year was moving the surfboard production from Asia to Europe. This factory has all the right ingredients for producing top notch surfboards.

With the latest 3D shaping machine, premium PU blanks and European fiberglass and resin, we were able to reduce weight, increase flex while the boards remain extremely durable. All the 2017 boards are 3D shaped and hand finished with traditional surfboard production process. This results in superior surfboard feel and optimized flex for comfortable ride. Everything is backed up with highly skilled and experienced workforce with eyes on every small detail during production.

No wonder, the 2017 surfboards are the best we have made so far.

ATV CUSTOM

All terrain vehicle.

The All Terrain Vehicle is the most versatile board in our range. The ATV was designed and developed with Tommy Gaunt, who has been shredding waves all over Australia, Antigua, Cornwall and Scotland, so the board handles a large variety of conditions ranging from small to big waves. With a medium rocker, the ATV planes early and generates speed. Even at high speed, the board has plenty of grip and is easy to handle. This makes it the best choice for riders looking to get into the kitesurfing discipline.

For 2017, the ATV has not only a brand new construction, but is now coming from a new factory in Europe. The new ultra light construction is as close to a proper surfboard as a kitesurfboard can get. There is no bamboo reinforcement, so the ATV now offers amazing flex and a real smooth surf feel. It is very forgiving and comfortable to ride. Under back foot heels, we use carbon fiber reinforcements, so the tail can hold a lot of pressure. Overall the new ATV is lighter, durable, more flexible and overall a lot nicer to ride.

Whatever the conditions are, the ATV is always ready to handle them.

AVAILABLE SIZES:
5'10" x 19"
6'0" x 19' 1/8"

STRAPLESS

New school freestyle.

AVAILABLE SIZES:
5'8" x 19" 1/8"
6'0" x 19' 7/8"

The Strapless is designed for newschool freestyle strapless tricks, small waves and light wind conditions. This board was designed and developed with the strapless king of Aruba Petr Pechi Pechacek, who is one of the best in this discipline worldwide.

For 2017, the Strapless has not only a brand new PU core and Polyurethane resin construction, but is now coming from a new factory in Europe. Overall, the new construction is lighter, but still strong enough for Strapless air trick landings. The deck is reinforced with Bamboo for added strength and more dynamic feel. The Strapless has a wide outline, lots of volume and and the biggest surface area in our range. With these properties and a thruster fin set up, the Strapless gets going really early even in light wind conditions. It will also not disappoint for surfing easy small waves. The strapless feels light, lively and is a lot of fun to ride no matter if the wind and waves are hauling or not.

STRIKE

Strength and power.

AVAILABLE SIZES:
5'4" x 18" 1/2"
5'6" x 18' 1/2"

The Strike delivers maximum performance in small to medium surf and works great for strapless freestyle tricks. It features a cut off nose shape for powered snappy turning and straighter outline for more control in the chop. This outline allows the Strike to have as much volume as regular surfboard shapes, even with the cut off nose. The volume of the board is more centered under the rider's feet and provides easier and more precise control. With a wider center, straighter outline and cut off nose, the Strike is extremely easy to ride.

For 2017, the Strike is made in Europe and features a PU core and Polyurethane resin construction. Overall, the new construction is lighter, but still strong enough for air trick landings. The deck is reinforced with Bamboo for added strength and more dynamic feel. If you are looking for an easy to ride dynamic board for small to medium surf and some strapless airs, the Strike is the right choice.
