

# CRAZYFLY BULLDOZER 140

The Bulldozer is Crazyfly's freestyle/wakestyle board. It features a centre concave and triple concaved tips. The centre concave adds to the stability and smoothness of the Bulldozer's ride and creates more control on heavy or misbalanced landings, while the triple concaved tips help with the speed and the grip that the Bulldozer produces which is perfect for the hard edging before a pop. This is also helped by the Bulldozer's Edge Control Track which is a stepped channel on the centre of the board, aiding the Bulldozer upwind and tracking with minimal effort. The Bulldozer CNC'd core and Multiaxial Glass composition create a strong torsion with the forgiving flex, creating an explosive pop and limited negative rocker.

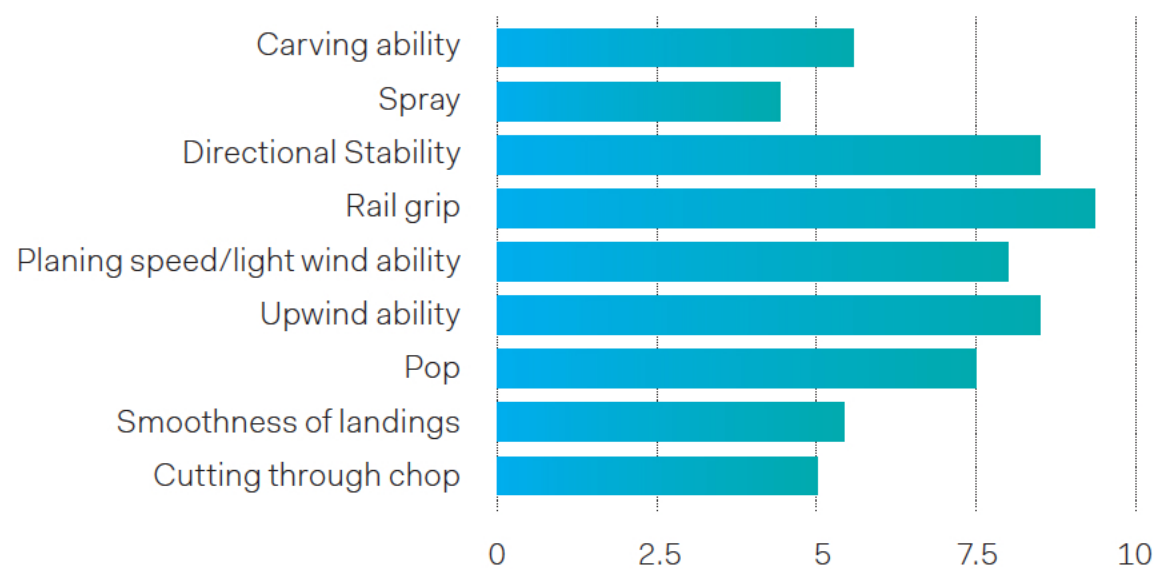

With use of cutting edge materials and production in

Europe, CrazyFly have shown that quality is of utmost importance. Crazyfly have reinforced the Bulldozer throughout with Uni-directional Kevlar, a lightweight material with extreme tensile strength which in turn creates a board that will last the test of time.

The Bulldozer's best paired with boot to maximize the full potential of the board. Its aggression and grip that the Bulldozer creates needs the support of boots to keep the board underfoot and edge hard for the huge amount of pop the Bulldozer can create. Overall Crazyfly have created the Bulldozer for the dedicated freestyle and wakestyle rider and, in the slicks, the Bulldozer will blast along at high speeds and create an explosive pop to add to the extremities of your riding.

## SUBJECTIVE CRITERIA

## OBJECTIVE CRITERIA

Blank Weight (kg)	3.1
Rocker	Low / Medium
Rail Channels	Y
Tip channels	Y
Concave	Single
Rail shape	Stepped with delayed tip taper
Flex score (1 soft, 10 stiff)	7
Construction	Wood core, glass laminate & kevlar stringers
Mounting system	Straight M6 inserts
Boots Compatible	Y
Slider Proof Base	N
